

ICS Technology, Inc

Get your message out to employees and coworkers with ICS Screensaver Messenger Replace your old Screensaver

Our ICS Screensaver Messenger works just like a digital signage system in your screensaver for your internal announcements to all the PCs on your network and we also have an Alert Message Feature.

The ICS Screensaver Messenger is the ideal way to get your message out to employees and coworkers. Just by using the ICS Screensaver Messenger you can schedule information / presentations to pop up in the ICS Screensaver. This Screensaver acts just like a normal screensaver. You can set the idle time before the screensaver appears. We also have additional features that are very useful when you must get the message out quickly. We offer as part of our ICS Screensaver Messenger a quick alert message function that will pop up on every PC screen connected to your network moments after you schedule it. You can schedule your message to be displayed on a day and time you want on your screensaver. It works the same as our ICS SignPro PADS digital signage system for designing and scheduling presentations.

The ICS Screensaver Messenger is easily installed and communicates over your existing network to the ICS Screensaver manager software that can be located on any PC. The ICS Screensaver Messenger can work in conjunction with the ICS SignPro digital signage system
