INSTANT MESSAGING
OPTION

SignPro offers the ability to configure the system to send emergency and non-emergency messages to all screens on the system or selected screens. This option can be used to evacuate buildings in emergencies, to notify of store or building closing, or any other preset message that you need to broadcast quickly. These preset messages can be triggered from a fire alarm or security console with just a simple database connection. ICS can design and set up this option to work with your system. Requires a Sign Pro digital signage system
